Description

Technical details:

- **Browser:** Brave Browser 1.93.134; Chromium 151.0.7922.108
- **Login credentials:** username - "problem\_user"; password - "secret\_sauce"

Bug description

- The select options menu is displayed correctly
- Any choice selected results in the same fixed sorting criteria: *Name (A to Z)*

Steps to reproduce:

- > Login (username - "problem\_user"; password - "secret\_sauce")
- Click the sorting dropdown option menu
- Select any of the other 3 sorting criteria (e.g. "Price (low to high)" )

**Expected behavior:** Sorting criteria to be updated and inventory-items to be sorted

**Actual behavior:** Nothing happens, sorting criteria is fixed on "Name (A to Z)"

Manual Testing - identify bugs (PIAMTK-27)

 [PIAMTK-39] Functional bug: Reset App State button does not change "Remove" button back to "Add to cart" button.

Description

Technical details:

- **Browser:** Brave Browser 1.93.134; Chromium 151.0.7922.108
- **Login credentials:** username - *“standard\_user”*; password - *“secret sauce”*

Bug description:

- The **Reset app state** button removes the selected items from the cart correctly, but does not update visually the “Remove” button back to “Add to cart” for the individual product cards
- In the attached picture, 2 items were selected, then app state was reset. One more item was selected, resulting in 3 items appearing as selected, but only a “1” in the shopping cart badge icon.

Steps to reproduce:

-> Login (username - *“standard\_user”*; password - *“secret\_sauce”*)

→ Click **“Add to cart”** button for 2 different products

→ Click the **expand-side-menu** button in the upper-right corner

→ Click **“Reset App State”** button

→ Click **“Add to cart”** button for a third different product

**Expected behavior:** When clicking the “Reset App State”, the “Remove” button from all previously selected items should be replaced with the **“Add to cart”** button

**Actual behavior:** Items are removed from cart, but the “Remove” button is still displayed

Description

Technical details:

- **Browser:** Brave Browser 1.93.134; Chromium 151.0.7922.108
- **Login credentials:** username - "standard\_user"; password - "secret\_sauce"

Bug description:

The user should receive a warning-message of an empty cart, when trying to go to checkout.

**Steps to reproduce:**

-> Login (username - "standard\_user"; password - "secret\_sauce")

→ Click **cart icon** button

→ Click **"Checkout"** button

→ Enter anything in all 3 fields (e.g. First name - "validFirstName"; Last name - "validLastName"; Postal code - "1020")

→ Click **"Continue"** button to proceed

→ Click **"Finish"** button

→ Click **"Generate PDF order"** and save the confirmation-document

**Expected behavior:** When clicking the "Checkout" button, the user should not be allowed to proceed with an empty cart and receive a warning message (e.g. "Can't proceed with empty basket")

**Actual behavior:** The case of an empty cart is not covered and a user can complete a null order.

Description

Traceback:

- 1 Failed test
- **Script name:** functional-tests.xml
- **Suite name:** SauceDemo FunctionalTests
- **Test-Class name:** tests.InventoryTest
- **Thrown assertion-error:**

```
java.lang.AssertionError: Item added to cart but no button to remove.  
Expected :true  
Actual   :false  
...  
at tests.InventoryTest.testAddToAndRemoveFromCart(InventoryTest.java:30)
```

Technical details - Environment

- **Browser:** Google Chrome - v151.0.7922.137
- **Driver:** Chromium: <https://storage.googleapis.com/chrome-for-testing-public/151.0.7922.77/win64/chromedriver-win64.zip>

Observations:

- Debugging exception thrown in **BaseComponent** class, **isElementDisplayed()** Method:

```
Exception thrown: Element does not existExpected condition failed: waiting for presence of child element found by By.cssSelector:  
.btn_secondary.btn_inventory  
(tried for 3 seconds with 500 milliseconds interval)
```

Comments

Comment by [Armand Veress](#) [ 14/Aug/26 ]

The test was failing due to Google Chrome’s aggressive pop-up behaviour.  
The bug was fixed with extensive ChromeOptions:

```
chromeOptions.addArguments("--disable-features=PasswordLeakDetection");  
chromeOptions.addArguments("--disable-notifications");  
chromeOptions.addArguments("--disable-popup-blocking");  
chromeOptions.addArguments("--disable-save-password-bubble");  
  
Map<String, Object> prefs = new HashMap<>();  
prefs.put("credentials_enable_service", false);  
prefs.put("profile.password_manager_enabled", false);  
prefs.put("profile.password_manager_leak_detection", false);  
prefs.put("safebrowsing.enabled", false);  
  
chromeOptions.setExperimentalOption("prefs", prefs);
```

Description

Explore the [Saucedemo](#) site, **identify bugs** and open detailed issue tickets about them:

- Clearly state the **expected result** and the **actual result**
- List all steps to **reproduce the bug**
- Add **technical context** (session, environment, etc.)
- Give a **priority** accordingly, based on the severity / urgency of the error

Description

Traceback:

- 1 Failed test
- **Script name:** auth-tests.xml
- **Suite name:** SauceDemo AuthTests
- **Test-Class name:** tests.auth.LogoutTest
- **Thrown assertion-error:**

```
java.lang.AssertionError: Logout button is not displayed.  
Expected :true  
Actual   :false  
[...]  
at tests.auth.LogoutTest.testLogout(LoginTest.java:32)
```

Technical details - Environment

- **Browser:** Google Chrome - v151.0.7922.137
- **Driver:** Chromium: <https://storage.googleapis.com/chrome-for-testing-public/151.0.7922.77/win64/chromedriver-win64.zip>

Observations:

- Manual test for this function was **successful**
- There is a css transition for opening up the hamburger menu, **taking a fraction of a second for the logout button to be displayed**

Description

Rewrite the “testAccessLoggedOut” method using a **DataProvider** for PROTECTED\_PAGES, instead of a for-loop over a string list.

**Reason: Fail-fast trap**

- in its current form, if the test fails for the first page, the test will stop without checking the rest of the pages
- with a data-provider, the test is executed individually for each page, highlighting if an eventual problem is related to a single page, or to the entire site.

Description

Use the demo with the simple tests as example and start building the project. Use the base structure and try following best practices:

- **Exception handling** (throwing them with specific messages, while making sure they stop the failed tests)
- **Encapsulation & separation of concerns**
- **Clean code** without redundancies
- etc.

Start working on the Automated Testing project (PIAMTK-5)

Description

- Create a new **Java + Maven project**
- Configure its core **dependencies (Selenium + TestNG)**
- Download **2 distinct browser-drivers** and save them in a designated folder (/drivers)
- Organize the project into 3 main packages:
  - > **base**: code for initializing the drivers
  - **pages**: code for organizing and mapping buttons and fields
  - **tests**: actual tests to be written
